DIVISION OF PUBLIC HEALTH STATISTICS

INDIANA HEALTH PROFILE, 1986

INDIANA STATE BOARD OF HEALTH

POPULATION DATA

Preface

The Indiana State Board of Health is charged, under the provisions of the Indiana Code 16-1-3.4, Section 3, to assess the health needs of the citizens and communities of this State. The report must address needs on a county-by-county basis.

This needs assessment is the second attempt by the State Board to assess, in a comprehensive and systematic manner, the health needs in Indiana on a county-by-county basis.

The method used in this study to assess health needs was based on a predetermined "discrepancy" model.

The results of this study are contained in the volume, Indiana Health Needs Assessment By County, second edition, 1987.

The county-by-county profiles are contained in this document, Indiana Health Profile. For each of the 92 counties and states, the document contains profile data on population, households below poverty, median buying index, number of county residents in the labor force, unemployment rate, area in square miles, and number of residents on public assistance.

Health status indicators are addressed by age groups: infants, children, adolescents and young adults, adults, and older adults.

Health systems indicators are addressed by an array of health promotion and disease intervention indicators, diagnosis and treatment indicators, support services, and an inventory of health facilities and services.

These documents are available to the public upon request and/or during regular business hours at the Bureau of Policy Development, Indiana State Board of Health, 1330 West Michigan Street, Indianapolis, Indiana 46206-1964; phone: 317/633-8509.

TECHNICAL NOTES

1. Population of each county by several subgroups for the year 1986 is contained in pages 1-56. This should facilitate program planning and identification of target groups.

2. Beginning with page 57 (Profile and Health Status Data), the number provided is the mean for the years 1984, 1985, and 1986.

3. An inventory of health facilities and services begins on page 113.

4. Comparable Indiana and U.S. rates, on each health status criterion, where available, are contained in the Appendix.

5. Where numbers are not appropriate, the following code is used:

   Y = Yes
   N = No
   M = Met
   U = Unmet
   NF = No Facilities
   L = Less
   M = More
   ISBH = Indiana State Board of Health

6. Data (number and rates) for each year 1984, 1985, and 1986 is provided to the local health department and to interested parties upon request.

7. There are 34 separate key criteria. A larger set of 96 criteria was developed for a more detailed analysis of county-level data.

8. A complete set of these State-approved criteria and target levels is available in the document titled Profile Data and Criteria of Adequacy, January 1988. This document will provide the necessary information to compare each county with the target for each of the array of criteria.

ADDENDA ERRATA
INDIANA HEALTH PROFILE, 1986

Please substitue the infant mortality rates on this sheet for the White and Nonwhite infant mortality rates listed in pages 57-74
